520: The post-Cold War era has many implications for the way U.S.
military forces will be sized, equipped, and balanced. The recent
war in the Persian Gulf has given a new prominence to the role of
airpower in that balance. The United States has, and is planning to
maintain, overwhelming superiority in airpower. It is important to
explore whether a U.S. military strategy based on airpower
dominance is a prudent policy for the long term. The report
assesses whether a future foe's airpower could check or stalemate
U.S. airpower. The analysis seeks to shed light on whether other
nations will seek to increase their emphasis on airpower or instead
try to challenge the United States using other means.

Preface

This document contains the tabular data referred to in the report *Trends in the Global Balance of Airpower*, MR-478/1-AF. It provides a country-by-country accounting of military aircraft, surface-to-air missile (SAM), and helicopter inventories for the year 1991. It also provides the economic data on individual nations employed in the analysis for the years 1979–1989.

Project AIR FORCE

Project AIR FORCE, a division of RAND, is the Air Force federally funded research and development center (FFRDC) for studies and analyses. It provides the Air Force with independent analyses of policy alternatives affecting the development, employment, combat readiness, and support of current and future aerospace forces. Research is being performed in three programs: Strategy, Doctrine, and Force Structure; Force Modernization and Employment; and Resource Management and System Acquisition.

Project AIR FORCE is operated under Contract F49620-91-C-0003 between the Air Force and RAND.

| 7. GLOBAL MILITARY EXPENDITURES, 1979-1989 | 103 |
| Selected Bibliography | 111 |

1. Helicopter Data

The following table provides data on individual national inventories of military helicopters. We have specified general roles of the various assets as follows:

- Utility helicopters are typically not equipped with armament (with perhaps the occasional exception of a few light defensive guns). They tend to be the larger helicopters and are employed in such operations as airlift, medical evacuation, fire control, support, survey, search and rescue, utility, light observation, minesweeping, surveillance, and special operations.
- Armed helicopters are employed in land and sea combat. Armed helicopters designed for land operations can be armed with guided missiles, heavy cannon, and rockets; those configured for maritime operations can be armed with a mix of guided missiles and heavy cannon (for attacks against surface vessels) and/or torpedoes and depth charges (for attacks against submarines).
- Helicopters labeled as "unknown" were included in the utility category in the report's figures.

| Country | Number | Name | Role |
|--------------------|--------|--|---------|
| Afghanistan | | | |
| | 25 | Mil Mi-8 'Hip E' | Armed |
| | 30 | Mil Mi-25 'Hind' (export Mi-24D) | Armed |

4. Details on the Economic Data

Economic Data

The potential for nations to modernize their air forces will depend heavily on the current and future health of their economies, which in turn provides the funds needed by governments for discretionary spending on items such as national defense. This study examines recent historical patterns of global wealth distribution, central government expenditures, and military expenditures.

Economic data were obtained from *World Military Expenditures and Arms Transfers 1990 (WMEAT)*, a publication of the U.S. Arms Control and Disarmament Agency (ACDA). This publication contains data from 1979 to 1989. Although more recent data for the period including the collapse of the Warsaw Pact would have been highly desirable, such data simply were not available on a global basis, but estimates for various key nations were developed. The International Monetary Fund's *International Financial Statistics* and other data sources helped to make informed judgments where WMEAT data were missing.

Purchasing power parity (PPP) exchange rates were employed for estimating the economic data of the former major centrally planned economies—the former Soviet Union and other Warsaw Pact countries and China. Compilation of economic data of the former Soviet Union, other former Warsaw Pact countries, and China involves procedures that have considerable uncertainty understandably associated with them. Consequently, the resulting data for these countries should be regarded cautiously.

GNP Data

The ACDA GNP estimates for most noncommunist countries derive from the International Bank for Reconstruction and Development (World Bank). ACDA data for former communist countries come from the Central Intelligence Agency's (CIA) *Handbook of Economic Statistics 1990*. GNP is the measure of the aggregate value of a nation's output of goods and services. Data are occasionally available for gross domestic product (GDP) only. GDP is defined as GNP less net factor income/payments abroad. This difference is of little significance for our purposes, as GNP and GDP normally differ only by very small amounts.

Central Government Expenditures Data

The principal sources for ACDA data on central government expenditures are the IMF's *Government Finance Statistics Yearbook*, the IMF's *International Financial Statistics*, the Organization for Economic Cooperation and Development's (OECD) *Economic Surveys*, and the CIA's *World Factbook*.

Military Expenditures Data

NATO publications were the principal sources of ACDA data on NATO country military expenditures, which are defined as non-civilian-type defense ministry expenditures, including foreign military assistance. For other noncommunist countries, the defense ministry expenditures were obtained from the IMF's *Government Finance Statistics Yearbook*. Data for the former Soviet Union are based on the CIA's estimate of how much American resources would be required to build the Soviet military in the United States. China data are from the Defense Intelligence Agency. ACDA obtained military expenditure data on the former Warsaw Pact countries from the Congressional Joint Economic Committee.

Cost Comparisons

WMEAT contains historical country-by-country data on a range of key economic and military manpower variables. For analytic purposes, measuring the variables in constant-year currency is critical. Furthermore, expressing all economic data in a single currency is essential for making international comparisons. ACDA deflates each country's economic time-series to a base year constant currency by using each country's GNP deflator. In order to convert every currency time-series to a single currency (the U.S. dollar), ACDA employed exchange rates from the IMF's *International Financial Statistics* for the base year chosen. Using base year currency exchange rates avoids the distorting effect of fluctuating exchange rates that would result if one were to use different exchange rates for each year.

In the current international financial system, currency exchange rates fluctuate for a variety of reasons that often have little to do with a country's economic vitality, but much to do with supply and demand on the part of international currency traders for currencies. For instance, a periodic rise or fall in a country's interest rates will cause changes in the exchange rate for its currency. GNP estimates that use such exchange rates can yield different values from day to day as a result of these fluctuations, even though the economic strength of the country remains unchanged. PPP exchange rates circumvent this problem. A PPP exchange rate is that rate which renders equivalent the purchasing power of currencies across countries. Accordingly, PPP exchange rates

were employed for estimating the economic data of the former major centrally planned economies—the former Soviet Union, the other Warsaw Pact countries, and China.

5. Global Gross National Products, 1979–1989

Figures are in millions of FY89 dollars. Where estimates are employed, figures are denoted in italics. Estimates were typically interpolated between two known values.

| Country | GNP (US\$ M 1989) | | | | | |
|--------------------------|-------------------|-----------|-----------|-----------|-----------|-----------|
| | 1979 | 1980 | 1981 | 1982 | 1983 | 1984 |
